

MHBE Uninsured Analysis

Johanna Fabian-Marks
Director, Policy and Plan Management

April 19, 2021

Background

- In 2019, MHBE used American Community Survey (ACS) data from the Census Bureau to analyze the uninsured in Maryland by zip code and county and create an interactive online dashboard
- In 2020, MHBE updated the analysis, redesigned the dashboard, and created a “data pipeline” to allow quick, easy updates in the future as updated ACS data is released
- MHBE also modeled the potential impact of COVID-related job losses on the uninsured rate in 2020

Uninsured Analysis Methodology Overview

Total MD Population

```
graph TD; A[Total MD Population] --> B[Remove Institutionalized]; B --> C[= Total Uninsured]; C --> D[Remove Undocumented]; D --> E[= Total MHC-Eligible Uninsured];
```

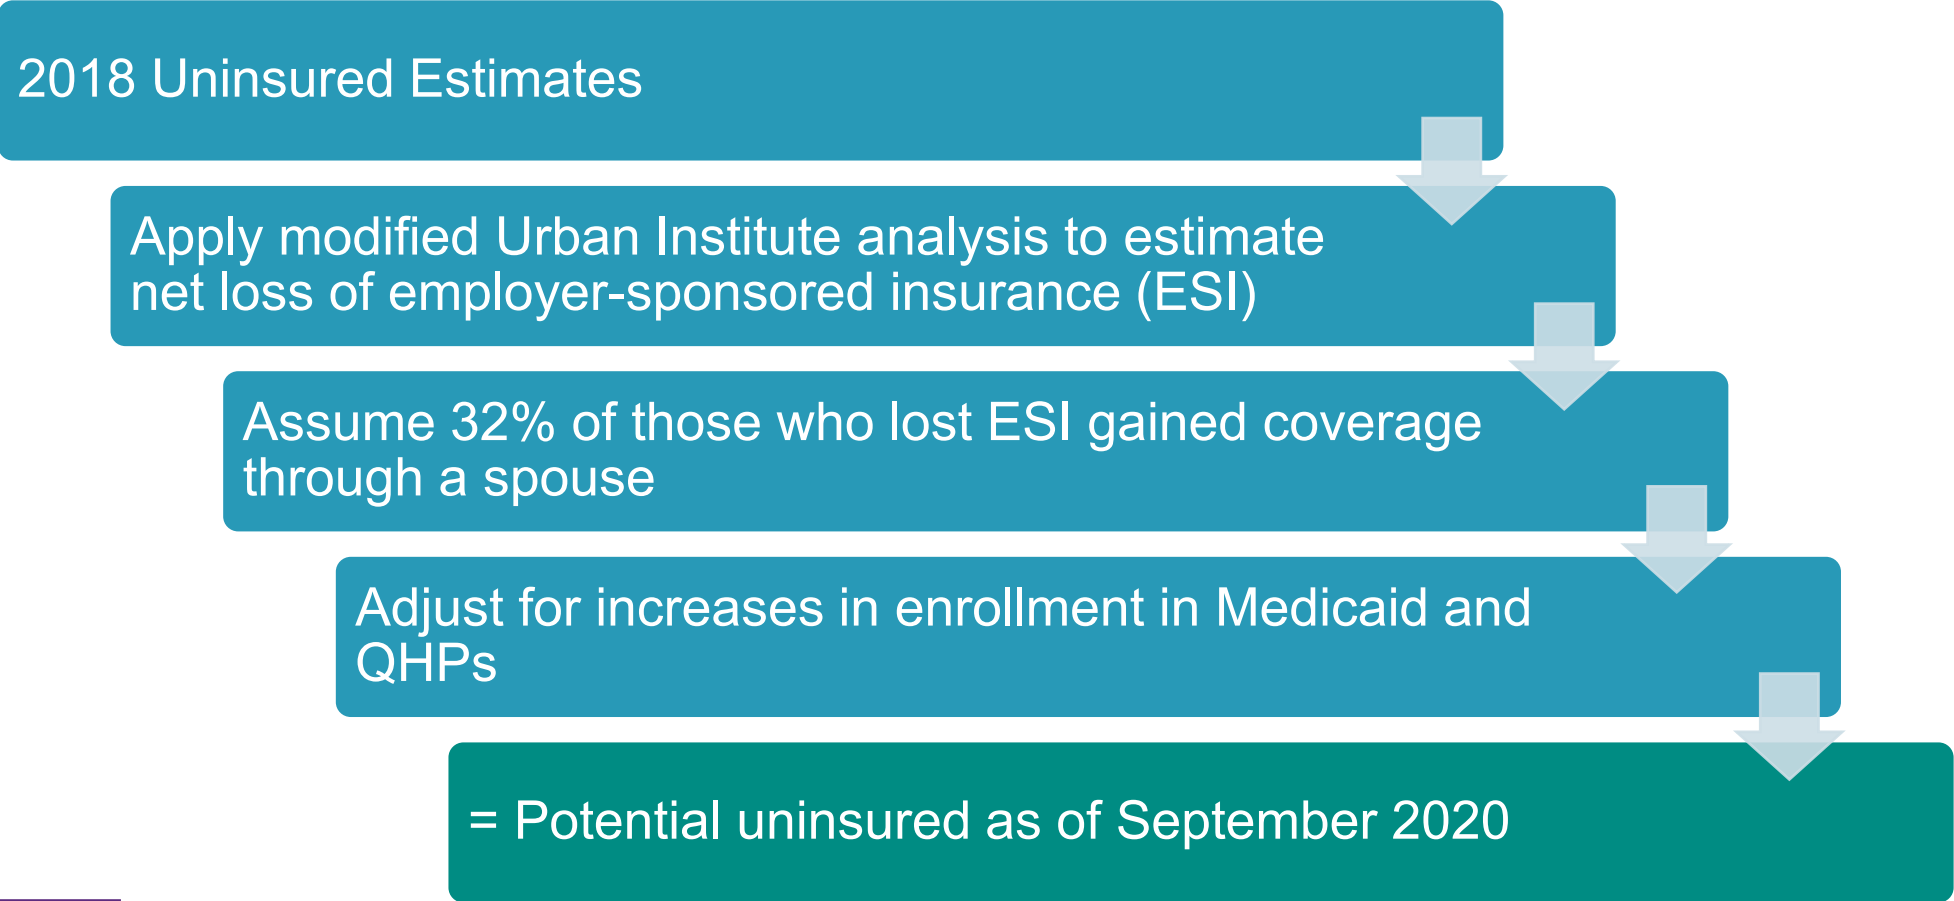

Remove Institutionalized

= Total Uninsured

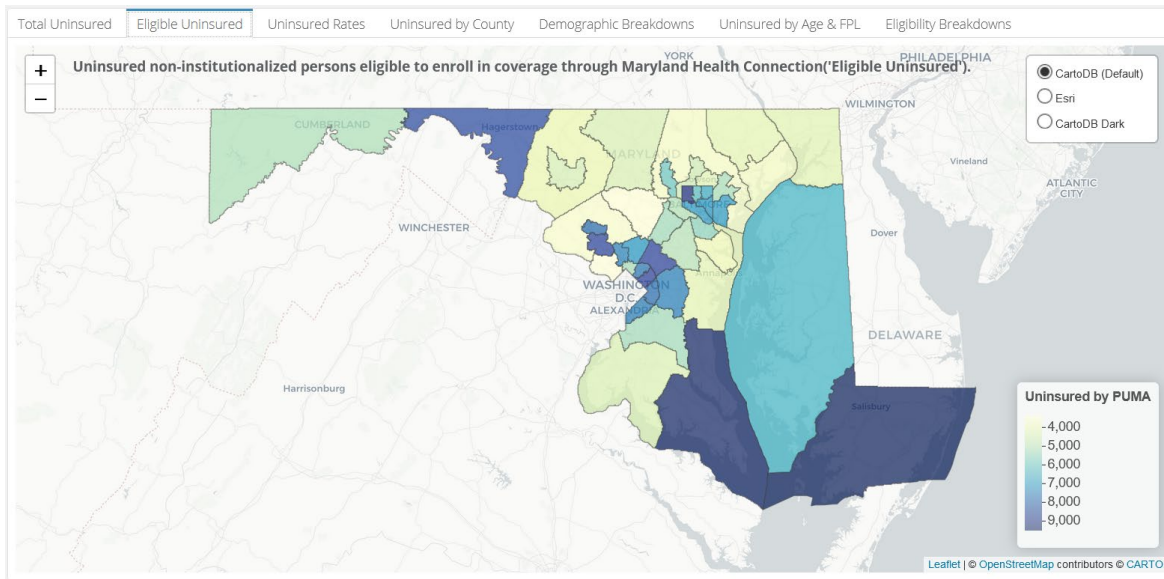

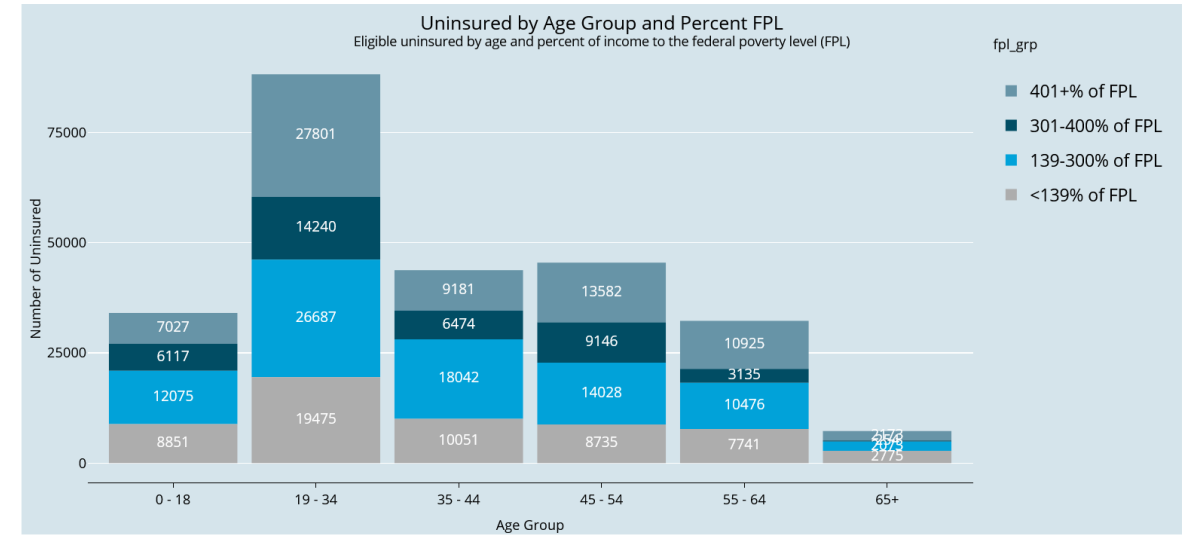

Remove Undocumented

= Total MHC-Eligible Uninsured

Potential COVID-Impact Methodology Overview

Visualizations of the Health Insurance Status of Marylanders

Bar graphs showing total uninsured and insured through employer covered populations by age and by race/ethnicity
